

## What Does Bencor Do?

Printed circuit boards (PCBs) are used in conventionally any modern-day form of technology. To create something using any kind of machinery and to not include this component in your crafting process will be a major flaw. This is why you need to find a PCB manufacturer who can make you high-quality circuit boards while still offering you an affordable price. Unfortunately, this can be a hard task to accomplish when you don't know what to look for.

Bencor wants to make this search easier by showing you why we are the best in PCB concerns. We have been providing people with top-notch printed circuit boards at an affordable price for over 25 years and this can be attributed to our passionate staff. [Contact us now](#) if you want to learn more about our story or if you want to start working with us.

## What is PCB?

Since the creation of the printed circuit board by Paul Eisler in 1936, the part has been used in almost every form of technology. It can come in various sizes and flexibilities; single sided, double sided, multilayered, rigid, flex, and rigid-flex PCBs. The actual printed circuit board is a self-contained component comprised of electrical and electronic parts.

These parts help distribute power to the right places and ensure your dream comes out in the best possible shape. To make them work you will need to either thread the required wire to the following component and solder it there, or you can surface-mount the attaching pieces and solder it this way. However, doing this alone can be difficult and dangerous when you are inexperienced.

## Bencor's Services

Bencor is proud to provide people with PCB manufacturing, assembling and everything in-between services. It doesn't matter if the part is a single sided or a multilayered circuit board, our talented staff will use our state-of-the-art equipment to create you something truly perfecting your product. We will even do our best to keep the costs to a minimum to ensure you make the most amount of money in the long-run.

Gifting people with competitively affordable pricing is what stands us out in the market and is just one way we look out for the client. Although, we don't just offer people PCB manufacturing, assembling and design assistance. Looking through [our services](#) you will notice we do quite a large amount of other beneficial services you can take advantage of.

## PCB Uses

Printed circuit boards are incredibly common, which is why they appear in a variety of different shapes of technology. Bencor has had the privilege of being able to provide support to those in

the medical, aircraft, fast food, oil and gas, fire detection, lighting, irrigation and even cosmetic industries. There is no limit to what these parts can do, which is why they are an important component to use.

### **The Best in Printed Circuit Board Manufacturing and PCB Assembly!**

Bencor can guarantee you a product you will be satisfied with. Being an ISO 9001:2008 Certified Contract Manufacturer ensures our creation process leads to a fantastic final result. [Contact us now](#) if you want to learn more about us or if you want to start a partnership.
